## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

Claim 24, line 2, delete "Bluetooth" and replace with -- Bluetooth <sup>TM</sup> --.

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1-24 and 37-51 are allowed.

As per claims 1-14, 37-38 and 41-51, specifically independent claim 1, the prior art of record fails to teach a method for allowing a universal mobile control and monitoring module to control and monitor a technical installation, wherein the technical installation is assigned to at least one regional control sub-area located within a control area, the method comprising a feature whereby "said loading of the HMI data for the control of the technical installation into the assigned universal mobile control and monitoring module is controlled as a function of a distance from the technical installation to the assigned universal mobile control and monitoring module." (As defined by [0022], and as reiterated on page 13 of the applicants remarks filed on 1/18/2008), in combination with the other claimed features and or limitations as claimed.

As per claims 15-24 and 39-44, specifically independent claim 15, the prior art of record fails to teach a human-machine-interface (HMI) system comprising a feature

whereby "said loading of the HMI data for the control of the technical installation into the assigned universal mobile control and monitoring module is controlled as a function of a distance from the technical installation to the assigned universal mobile control and monitoring module." (As defined by [0022], and as reiterated on page 13 of the applicants remarks filed on 1/18/2008), in combination with the other claimed features and or limitations as claimed.

Once again it is noted that it appears the closest available prior art was issued to Kretschmann on December 26, 2000. Kretschmann teaches the general concepts of the pending claims, but fails to disclose the specific feature of having different types of data, associated with each machine, loaded into the portable device, based on the distance of the portable device from the machine itself. It would appear that Kretschmann only discloses that when a device is within range of the machine, proper I/O data is loaded into the machine, and that this I/O data or control data may be related to the identity of the user (e.g. see Figure 5 showing different tasks for different machines). However, there is no disclosure of different tasks being loaded in the portable device based on the distance from the machine, as contemplated by the pending claims, in combination with the other claimed features and or limitations as claimed. This distinction, as defined by the only exemplary embodiment in [0022], forms the basis for the indication of allowable subject as set forth herein.
